

WHEEL STEERING

The 300-s Yeoman has a wheel steering kit available. This conversion has proven very popular with less able-bodied sailors. It gives the helm of the boat the ability to sail/race without having to move from the helm seat.

The wheel has very little resistance and can be turned with ease when you manoeuvre the boat. Only 1/2 a turn of the wheel is sufficient to turn the boat completely around.

It is recommended that this layout is sailed with the helm and 2 crew.

This will mean the helm doesn't need to worry about sail setting.

The conversion is easily installed taking about 10 minutes to fit in place.

Removal is as quick returning the boat to the original tiller steering layout.
